DotNet Developer

Description

We are currently seeking a DOT NET Developer to join a team of software professionals responsible for the requirements, design, construction, integration, testing and maintenance of client's software products which are designed to improve accuracy and efficiency in the business. The Developer will modify and enhance large and small scaled .Net applications to support the sales and operations of a global company. The individual will work all phases of the development lifecycle including analysis, construction and testing.

Responsibilities

- The Developer will modify and enhance large and small scaled .Net applications to support the sales and operations of a global company.
- The individual will work all phases of the development lifecycle including analysis, construction and testing.
- Design and develop software components on Windows/.NET platforms that will be utilized by multiple web browsers.
- .NET Developer, responsible for development, support, maintenance and implementation of a complex project module.
- Design and develop reusable software components and participate in design sessions with architects and developers.
- Ensure code and the design meets the customer's specifications without compromising quality and security standards.
- Provide .NET and database-based solutions by studying existing technology architecture; analyzing browser compatibility techniques; evaluating solution alternatives; and developing prototypes.
- Work with Business Analysts to analyze and convert business requirements into scalable, robust and flexible designs.
- Follow configuration management, coding standards, and version control policies.
- Investigate defects, present solutions with accurate estimates of work effort and implement the solution on time and on budget.
- Develop, remediate, and run unit tests.
- Participate in peer-to-peer code reviews.
- Create technical documentation and architectural proposals for peer review.
